

## Deletar um dado através do findByIdandDelete

```
const mongoose = require("mongoose");
const articleModel = require("./article");

mongoose.connect("mongodb://localhost:27017/aprendendoMongo", {useNewUrlParser:
true, useUnifiedTopology: true});

const Article = mongoose.model("Article", articleModel);

Article.findByIdandDelete("2bc5ca6450b05bb1a46054e").then(() => {
    console.log("Dado removido!")
}).catch(err) => {
    console.log()
});
```
